AWS Certified Developer –
Associate

John Miller

Senior Software Engineer

Arlington, Virginia, United States

Summary

With over a decade of experience as a Senior Software Engineer, I specialize in building web applications using C#, .NET, SQL, and JavaScript. Recently, I've focused on expanding my knowledge in cloud technologies by earning AWS certifications. I enjoy working with teams, sharing knowledge, and exploring new tools and technologies.

Experience

BAM Tech

Senior Software Engineer

June 2010 - December 2022 (12 years 7 months)

Arlington, VA

Oversaw the design and development of a STIG and 508 compliant web-based personnel management system for the Department of Defense utilizing MVC, JavaScript, Kendo UI, C#, Entity Framework, SQL, and StructureMap for Dependency Injection

Led a development team of 2-5 engineers, providing guidance and support while managing project timelines and deliverables to ensure successful completion of major software upgrades

Conducted thorough code reviews and peer coding sessions to maintain high code quality standards

Instituted a minimum code coverage threshold for unit tests using xUnit, Moq, and AutoFixture, ensuring that critical functionality was thoroughly tested

Managed the CI/CD pipeline using TeamCity and Octopus Deploy

Acted as SCRUM master during all ceremonies, guiding the team through Agile processes to improve workflow efficiency and project delivery

Destination Maternity Corporation

Programmer Analyst

November 2008 - September 2010 (1 year 11 months)

Developed an application that interfaces with other Windows APIs to capture and report the best phone numbers for our dialup store locations using VB.NET, saving the company \$70K annually.

Engineered a web navigation application that enables store associates to navigate the web without mouse hardware.

Build and support web applications according to defined specifications using ASP.NET/VB.NET, with integration of ExtJS and jQuery APIs for enhanced user experience.

Update existing ASP classic pages as business rules evolve

GE Energy

Programmer Analyst

June 2008 - November 2008 (6 months)

Castle Hayne, North Carolina, United States

Designed a system to store and analyze nuclear rod erosion data using VB.NET and SQL with export/import data functionality via MS Excel.

Responsible for gathering requirements from end users, designing and developing solutions, and hosting software presentation and feedback sessions with users and management

Signature Homes

Web Developer - Intern

October 2007 - March 2008 (6 months)

Responsible for search engine optimization through content management, blogging, link building and Google Analytics

Maintained luxury real estate site using HTML and CSS.

Education

University of North Carolina Wilmington

Bachelor of Science (B.S.), Management Information Systems,
General · (2006 - 2008)
